

**Requis :**  
1 abonnement internet mobile avec au minimum 1GB / Mois par machine

Visualization and control on touchscreen

Historic management

Alertes SMS  
Remote alarms management

Multi-Machine supervision

# Web technology Dositech.Net

**VISUALIZATION**  
Graphical representation of all the functioning parameters of the machine

- PRINCIPAL FUNCTIONS**
- Programming of irrigated sector (forward and reverse)
  - Programming of application rate by sector (forward and reverse)
  - Timer settings
  - Programming of duration of activity
  - Choose the programme to suit your requirements
  - Programming of the machine's different features
  - Programming of the dosing pump
  - Programming of parameters for each sector
  - Programming of stop gun sectors and auxiliary control

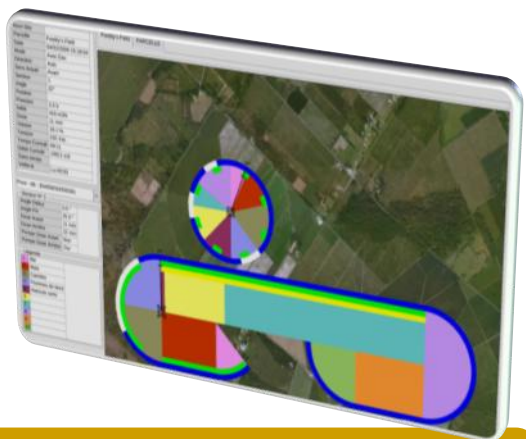

**MULTI-MACHINE SUPERVISION**  
• Compatible with windows PC or PDA

- The possibility to operate to an unlimited number of pivots or linear moves over a multitude of fields
- Remote programming of different sectors, application rates, timer settings, parameters, etc.
- Uptading of all the machines by the server

**HISTORIC**  
Gestion complète des historiques : secteur en service, position appareil, dose apportée, pression d'eau et débit, type de défaut, etc... avec possibilité d'archivage et création de graphiques sous forme de courbes.

Complete managing of historic : active sectors, machine position, application of water, water flow and pressure, type of fault, etc... with the possibility of archiving and creation of graphics (curves).

- ALARMS**
- The pivot sends messages to a mobile phone detailing the nature of any incident. It is capable of sending messages to three phones simultaneously.
  - Remote visual access to faulty span is possible via your computer.

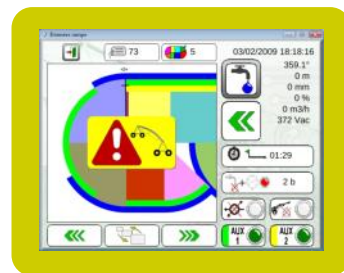

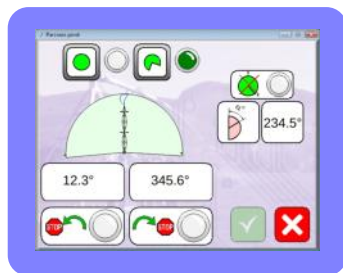

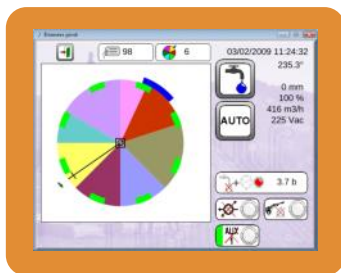

The Dositech.Net allows the complete management of a pivot or a linear on a color touchscreen directly in front of the main control panel. This new version
